Proposed Fair and Open Price Quote for the following:

NOTICE TO CONTRACTORS – Prevailing wages may be applicable

INFRARED ASPHALT RESTORATION OF MANHOLE LOCATIONS

NOTICE IS HEREBY GIVEN that sealed price quotes will be received on 10/30/26 @ 1:00pm, Clerks Office, 900 West Bay Ave., Barnegat NJ 08005, by the Barnegat Township for infrared asphalt restoration surrounding approximately 60 to 80 existing manholes at various locations throughout the Municipality.

The work generally consists of furnishing all labor, materials, equipment, and supervision necessary to perform permanent, seamless infrared asphalt restoration around designated manhole structures. Traffic Control will be provided by the Municipality.

All restoration work shall be performed utilizing the infrared heating process and in accordance with the Municipality's Specifications for Infrared Restoration. The contractor shall furnish hot FABC asphalt maintained at the specified temperature in a thermostatically controlled storage unit and shall utilize truck-mounted infrared equipment capable of uniformly heating the existing pavement without burning or damaging the asphalt surface. The underlying specification requires FABC to be transported and maintained at 275–300°F.

Contractor Qualifications and Capacity -

Due to the number of locations and the required completion schedule, contractors shall demonstrate the ability to mobilize sufficient experienced personnel and equipment to complete the entire project in approximately 8 – 10 business days, no later than December 5, 2026, weather permitting.

The successful contractor shall, at a minimum:

- Have two or more fully equipped and independently operating infrared restoration crews available for deployment to this project when required to meet the Municipality's schedule.
- Demonstrate a minimum of three years of experience performing infrared asphalt restoration, with preference given in determining contractor responsibility to documented experience involving manholes, utility openings, and public roadways.

- Provide documentation of successfully completed infrared restoration projects of comparable size and scope, including references for municipal, county, utility, or other public roadway work.
- Maintain sufficient equipment redundancy so that failure or breakdown of a primary infrared unit will not materially delay completion of the project.
- Provide truck-mounted infrared heating equipment of at least 6 feet by 8 feet, capable of softening existing asphalt pavement to a depth of approximately 1½ to 2 inches without burning the pavement.
- Provide thermostatically controlled asphalt storage equipment capable of maintaining FABC at the required installation temperature.
- Provide all required compacting equipment, labor, vehicles and ancillary equipment necessary to perform the work continuously and efficiently.
- Provide a one-year warranty covering failures attributable to defective materials or methods of application, consistent with the project specifications.

Schedule -

Time is of the essence. The contractor shall submit with its bid a proposed work schedule identifying the number of crew members and infrared units that will be committed to the project. The contractor shall have sufficient personnel and equipment available to perform work at multiple locations concurrently when directed by the Municipality.

All work must be substantially completed on or before December 5, 2026.

The Municipality reserves the right to require contractors to provide equipment lists, crew qualifications, project references, and other documentation necessary to determine whether the contractor possesses the experience, resources, equipment capacity and demonstrated ability to complete the work within the required schedule.
